EDUCATION

Computer Science

Bachelor in Computer
Science University of
Science and Technology
Houari Boumediene
(USTHB)

2023-2026

UDEMY

Technical Mathematics
Academic Branch Track

EXPERTIS

- C++ & Engine Architecture
- Unreal Engine / Unity / Godot
- FiveM Server Engineering
- Full-Stack Web (React, Next.js)
- Advanced SQL & Databases
- Low-Level System Emulation

PROFILE SUMMARY

Highly accomplished and driven Senior Software Engineer and Game Developer with over 6 years of deep programming experience. Expert in low-level systems emulation, custom game engine development, and advanced Unreal Engine architecture. Proficient in bridging complex C++ simulations with scalable full-stack web technologies, responsive interfaces, and optimized database frameworks. A problem solver dedicated to writing clean, maintainable code and building immersive interactive experiences.

WORK EXPERIENCE

Lead Systems & Game Engineer

2021 - present

Freelance / Self-Employed

- Architected and engineered a custom low-level PlayStation 5 emulator from scratch, successfully simulating hardware subsystems to run 2D and demanding 3D titles with stable resource allocation.
- Designed and developed a highly interactive open-world sandbox game within Unreal Engine, programming deep procedural animal simulation systems and complex animation states.
- Built a proprietary 3D modeling and rendering application (Blender-like architecture) and a C++ custom game engine to master graphics pipeline processing and runtime execution.
- Developed and deployed over 17 interactive production-ready full-stack web applications using Next.js, React, PHP, and highly optimized relational SQL databases.

FiveM Infrastructure & Multiplayer Developer

2020 - 2026

Private Multiplayer Servers

- Engineered and optimized multiplayer environments and dedicated server frameworks for the FiveM platform using Lua and JavaScript.
- Developed custom high-performance server-side infrastructure and advanced synchronization algorithms to handle massive real-time player data with minimal latency.
- Programmed bespoke gameplay scripts, integrated backend web systems with game databases via optimized SQL queries, and solved severe runtime memory leakage issues to sustain peak server performance.
